Experience

Software Engineer Intern | Carrier | Beverly, MA — June 2024 — August 2024

- Assisted in API test automation by writing **152** integration tests for RESTful API endpoints using Playwright
- Designed positive and negative test validations for endpoints across internal and external .NET API microservices
- Validated endpoints and payloads using Postman to ensure functionality of legacy ReadyAPI tests
- Streamlined testing by restructuring verbose JSON payloads into object-oriented data models
- Created documentation detailing quality assurance process to reduce onboarding time for new team members

Software Engineer Co-op | Broad Institute of MIT and Harvard | Cambridge, MA — January 2024 — June 2024

- Aligned React UI with Figma board, improved data presentation in **5** components, refactored **22** misaligned types
- Enhanced **4** Spring Boot REST APIs by extending SQL queries to incorporate clinical data from GCP and Azure
- Refactored **7** complex constructors using the Builder pattern, enhancing code reusability in **5** API endpoints
- Automated the API profiling process to facilitate data-driven performance optimization with Python scripting
- Contributed to custom cohort creation, data accessibility, and biomedical research workflows by merging **27** PRs

Full-Stack Software Engineer Co-op | Media Cloud | Boston, MA — May 2023 — September 2023

- Implemented Jest testing framework with **287** tests across **16** functions ensuring robust code quality
- Resolved **40**% of frontend crashes by identifying and handling edge cases in Material-UI icon rendering logic
- Built a background task for concurrent large data downloads and automated zipping and email delivery
- Strengthened registration security by implementing custom validation logic in Django with a corresponding UI
- Developed a dynamic query naming system, enhancing analysis for **80**% of searches across **7** data visualizations

Software Engineer Intern | Media Cloud | Boston, MA — May 2022 — May 2023

- Initialized full-stack application with a Django backend and React frontend
- Streamlined frontend development with RTK Query eliminating the need for manual data fetching and caching
- Designed a proof-of-concept frontend using wireframes, React, Material UI, and SASS for **10+** early-stage researchers
- Implemented user authentication with Django REST, CSRF validation, and password reset with email authorization
- Developed v1 search feature supporting online news, Twitter, Reddit, and YouTube

Education

Northeastern University | Boston, MA — Expected May 2025
Candidate for B.S in Computer Science – Concentration in Artificial Intelligence, Minor in Math — GPA 3.5/4.0
Relevant Coursework: Reinforcement Learning | Research in Natural Language Processing | Artificial Intelligence
Object-Oriented Design | Algorithms and Data | Computer Systems | Software Engineering
Machine Learning and Data Mining | Linear Algebra | Probability and Statistics
Leadership & Activities: Founder and President of the Northeastern Art and Creative Therapy Club

Technical Knowledge

Frameworks/Libraries: React | Angular | Spring Boot | Node.js | Django | .NET | Flask | Google Cloud Platform (GCP) Microsoft Azure | MongoDB | Playwright | ReadyAPI | Postman | Swagger | PostgreSQL | MySQL | Junit | Jest | Git
Languages: TypeScript | JavaScript | HTML | CSS (SASS, Material UI) | Python (Pandas, NumPy, Matplotlib, Scikit-learn, TensorFlow, Seaborn) | Java | C# | C | Assembly | Racket | SQL | Bash | Lean | Lisp (Racket)

Projects

Reinforcement Learning for Chess Agents — September 2024 — January 2025

- Implemented Advantage Actor-Critic (A2C) and Soft Actor-Critic (SAC) algorithms to train and compete chess agents
- Evaluated performance based on win rates, demonstrated SAC achieving a **4.1:1** win-to-loss ratio over A2C
- Conducted comparative analysis of both algorithms, highlighting strengths and weaknesses in decision-making

DeepArtist – The Artist Classification System — September 2023 — January 2024

- Achieved nearly **80**% accuracy in artist classification with a CNN model, making AI-driven art analysis accessible
- Developed a React frontend to visualize model accuracy, adjust hyperparameters, and explore real-time classification
- Built a scalable Flask backend to support model training, versioned data storage, and future dataset expansion
